A Homeowner’s Guide to New Technology

For Use in Door County

Created Wetland Water Treatment Systems
LINING THE WETLAND CELL

Lining the wetland cell is possible. For a wetland cell to function as intended, the area of the wetland cell must be defined by the necessary depth. The depth is critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended. The depth is also critical because it determines the amount of water needed to function as intended.
